Mail Template - Installation Guide

1 Checklist

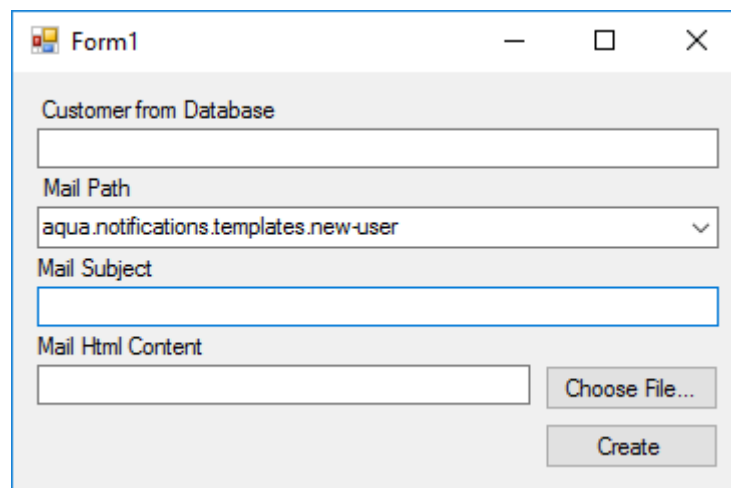

Before following this installation Guide, you should check if you received all required files. You should have received a zip-File that contains the following:

- Folder: CompileMailTemplate-Tool
- File: ChangedPassword-DE.html
- File: ChangedPassword-EN.html
- File: NewUserPassword-DE.html
- File: NewUserPassword-EN.html

2 HowTo

2.1 Create update file

Start CompileMailTemplate.exe in folder **CompileMailTemplate-Tool**.

Customer From Database

The 'Customer from Database' can be found in aqua Database Table "Customer" in Column "Name".

Mail Path

Select one of the two options

- aqua.notifications.templates.new-user
- aqua.notifications.templates.changed-password

Mail Subject

Enter the subject of the Email

Mail Html Content

Select the HTML-File to be used for the Mail-Body. Several Templates in German and English have been added to the package (see Checklist above). Choose an appropriate one and adapt it to your needs.

Finally click **create**.

2.2 Update aqua Server

Copy the result file (*.up) to the following folder on aqua Server (in default installations)

C:\Program Files\andagon GmbH\aquaserver\updates

The file is processed automatically after a while.

Important: file extension changes after applying the update

- *.fup => failed
- *.pup => processed successfully
